Commercial Services

Three Easy Steps For a Typical Service Visit

When unwanted "guests" move in, you need a professional to move them out and keep them out.

With commercial experience within many industries and service areas, we understand the unique challenges associated with infestations in high traffic and public areas. Ongoing training ensures that A1 professionals always provide the latest and most successful techniques, methods and treatments.

Your family, clients, employees and pets are our first priority. You can expect personalized service and guaranteed satisfaction.

3 Easy Steps

Our three-tiered approach makes it easy to say goodbye to unwanted "guests."

1. **Inspection:** An A1 inspector will locate and identify your problem, analyze the situation and design a cost effective plan to solve your pest invasion problems.
2. **Proposal:** You will receive a custom proposal, with a plan designed to address and effectively control your pest management problems.
3. **Service:** A1 technicians administer and continually monitor your pest management program to ensure the highest quality of service. We work with you to provide a pest-free environment, and give you detailed reports on sanitation and other pertinent areas.

> "Thank you. Excellent job, excellent communication and great scheduling. Thanks for all your help."

Don't let ANY pests check in to your business... let A1 check them OUT!

We Are Pleased To Offer The Industry's Best Defense System Against Termites At An Incredible Price

Chosen to protect the White House, Statue of Liberty, Independence Hall & over 2 million structures nationwide.

Monitor, Bait and Eliminate

Sentricon® is a patented and proven termite elimination system that provides a continuous perimeter defense to kill termites and their colonies well before they make your home their home. Sentricon is the only system that continues to guard structures by monitoring for future invasions.

Inspects the property for signs of termites

Places Sentricon® stations containing Recruit® HD termite bait in the soil around the home

Once termites enter the station, the Recruit HD termite bait is immediately available

Continues monitoring Sentricon stations as needed to protect against future invasion

SENTRICON®

Termites need food, moisture, and warmth to survive. If they can find a way into your home, it's the perfect place to live. A1 specialists can help you identify problem areas around your home that might be attractive to termite colonies, as well as any signs of possible termite activity. **Prevention is key.**

Termites cause over $5 billion dollars of property damage each year in the US alone. Typically homeowners insurance does not cover termites or the damage they cause.

Whether you are building a new home and want to take preventative measures against termite attacks, or you currently have a termite problem in your home, A1 Exterminators can help.

Our team of professionals has the solution – we'll evaluate your property and discuss termite treatment options to protect your home.

TERMITES DAMAGE 600,000 HOMES & CAUSE $5 BILLION IN REPAIRS EACH YEAR.

When It Comes to Eliminating Bed Bugs, Our System Is The Solution.

Commercial • Residential

Integrity • Inspection • Education
Eradication • Prevention • Discretion

You Can Never Be Too Methodical or Thorough In Bed Bug Elimination

Bed bugs are small, cryptic and agile preferring to hide close to where they feed. However, if necessary, they will crawl several feet to obtain a blood meal. Initial infestations tend to be around beds, but the bugs eventually may become scattered throughout the bedroom, occupying any crevice or protected location.

The social stigma of bed bug infestation creates its own challenge. People do not always tell others because they are embarrassed. Thus, visiting guests unknowingly may take the bed bugs home with them.

A1's Integrated Pest Management (IPM)

approach to bed bug control and eradication combines all available methods of eliminating bed bugs. We tailor our services to suit your needs and budget.

Did you know...

Females can lay 200-250 eggs, which mature to adult stage within four to six weeks, meaning one or two bed bugs can turn into a massive infestation within a couple of months, if not caught and treated early.

Bed bugs can spread quickly throughout a building. The bugs travel from room to room or floor to floor by crawling and by human transport. Bed bugs are efficient hitchhikers and may be brought in on luggage, clothing, beds, furniture, and other items. Hotels, motels and apartments, face additional challenges due to the constant turnover of occupants.

You Can Never Be Too Methodical, Comprehensive or Thorough In Bed Bug Elimination—Introducing The A1 Exterminators 8-Step Program.

Consultation & Inspection

1

Visual inspection by trained A1 professionals or K-9 scent detection

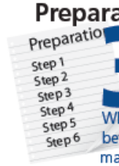
Education

2

What you need to know about bed bugs and what you can do to prevent additional problems

Preparation

3

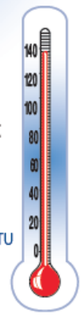


What you can do before we arrive to make treatment successful

Heat Treatment

4

By our powerful computer monitored 450,000 BTU Heatwave system.



Insecticide Treatment

5

Insecticide Treatment with long lasting residual insecticides for long lasting results

Follow Up A1 Visits

8

As part of an on-going program to detect and eliminate new infestations.

K-9 Verification of Elimination

7

Gas Fumigation

6

Gas Fumigation of all your furniture and belongings in sealed containers or treatment of your entire home by our specially trained and licensed fumigation team is 100% effective

How To Check for Bed Bugs

1. Starting with the area closest to the bed, visually inspect using a good, strong flashlight. Check the mattress and pillow seams thoroughly.
2. Check for dark brown or reddish blood spots from the bed bug fecal droppings on all bedding surfaces (sheets, comforters, dust ruffles, mattresses, pillows).
3. Slowly lift the mattress or box spring off the frame. Check the underside of the box spring–the most common hiding place for bed bugs. ***Remember, that fine mesh lining the bottom of your box spring is no match for bed bugs wanting to hide inside.***
4. Check the top and underside of the frame carefully. This is a particularly favorite place for bed bugs as it is close to its blood meal (you) and is an undisturbed and well-hidden location on the bed.
5. Look in all the cracks and crevices near the bed. This means on the floor, walls and ceiling. Check under chair cushions, behind hanging pictures, around and inside electrical outlets, behind and under dressers, mirrors, along floorboards, etc.
6. Clutter on the floors, closets, bookshelves, etc, are all good hiding places. Inspect these areas methodically and carefully.
7. Inspect yourself and your family. Bed bugs typically, but not always, bite in a straight line. The bites appear red and swollen and may have a small dip in the middle, much like a mosquito bite. Be aware it is difficult, even for professionals, to diagnose that a bite is indeed from a bed bug. And remember, not all family members will show signs of bed bug bites, even though they are being fed upon.

No matter which pest you have, A1 will eliminate them... for good.
